

The palette

Seven values. Nothing on the website, in print, on social or on signage uses a colour that is not on this list. Contrast ratios are stated so they can be re-checked rather than trusted — every text role clears WCAG AA on ink.

	Ink Primary ground	#0B0A0C — on ink
	Surface Raised panels	#141216 — on ink
	Bone Primary text · logo chevron	#F4F1EC 17.5:1 on ink
	Ember THE accent · logo · CTAs	#FF5C29 6.4:1 on ink
	Mint Digital & AI only	#7FE0CF 12.7:1 on ink
	Ash Secondary text	#A9A39B 7.9:1 on ink
	Slate Labels & metadata	#8B8592 5.0:1 on ink

IN PRINT

Ember and Mint fall outside CMYK gamut and print duller than they look on screen — use a spot colour where the budget allows. Ink must be a rich black (60/40/40/100); 0/0/0/100 prints thin and grey. Ember 0/76/88/0, nearest spot Pantone Orange 021 C. Mint 45/0/25/0, nearest spot Pantone 3248 C. Both Pantone references are the closest match by eye — check a physical guide before a run.

Lockups

The silhouette is unchanged — its geometry was traced from the original artwork, not redrawn. What moved is the counterform: gold became Ember, so the mark runs on the same accent as every surface it sits on.

RULES

- Keep the mark's own width clear on every side. Nothing sits inside it.
- Minimum: 120 px wide on screen, 30 mm in print. Below that use the mark alone — it holds to 16 px.
- Over photography use the one-colour mark on a scrim. Ember on an unpredictable image is unreadable.
- The chevron is Bone on dark, Ink on light. Never anything else.

NEVER

- Re-space the mark and the wordmark.
- Add a shadow, gradient, outline or bevel.
- Set the wordmark in another typeface.
- Rotate, stretch or recolour the counterform.
- Reintroduce gold. Run existing stock down; do not reorder.
